(54) Title: CONTAINER CLOSURE ARRENGEMENT

(57) Abstract: A container comprises a hollow body (6) blow-moulded from an injection-moulded thermoplastics preform, the body (6) having an inside shoulder (28) at a mouth end of the body, the shoulder (28) having a radially innermost diameter less than the internal diameter of the axially outermost extremity of the mouth end. A foil (8) closes the body (6) at the shoulder (8) and is sealingly attached to the shoulder. A snap-on, removable, injection-moulded closure (10) is applied over the (10) mouth end of the body (6).
